

Traditional Park Bench

PRODUCT OUTLINE

This Traditional Park Bench is a variation of the Classic Park bench. Its unique frame design requires no cross bracing. The leg frames are constructed from strong tubular steel and the seat sections are made from heavy gauge perforated steel. A durable polyester powder paint finish on both the frames and seat sections will assure lasting beauty. A hot dip galvanized finish is also available for the leg frames. The surface mount versions can be used as portable benches or for indoor applications such as locker rooms.
